ROLLE 9

IS DURABLE AND EASY TO USE

Rolle 9 is the best choice for a wrapping machine, especially when the ease of use and durability are important.

Quick and easy to use

- 1 **Simply select light or strong wrapping and then press the start button.**
 - If necessary, the wrapping can be paused using the pause function. This is useful for loading products or fitting a top sheet.

The tension of the wrapping film is easy to adjust

- 2 **Pre-tensioning of the wrapping film brings significant savings.**
 - The tension of the wrapping film may be easily adjusted to suit the wrapping required by the product and the desired stability during transport.
 - The film roll is easy to change.
 - The film can be fed manually with the help of a button in order to attach the film to the product pallet.
 - A photocell automatically recognises the height of the pallet.

Turn table

- 3 **The rotation of the table is controlled with a frequency converter, which reduces mechanical stress and maintenance.**
 - The stepless adjustment of the rotation speed and the soft start enable the wrapping of even unstable product pallets.
 - The turn table always stops in the same location that enables the use of a ramp, which is available as an option.
 - Available also as an FS version, enabling the use of pallet jacks.

Technical specifications

Voltage	220–240 V/50 Hz	Rotation speed	1–11 rpm
Dimensions	2,575 x 1,650 mm	Max. pallet dimensions	1,200 x 1,000 mm
Height	3,000 mm	Wrapping height	500–2,600 mm
Turn table Ø	1,650 mm	Max. pallet weight	1,200 kg
Table height	80 mm	Film roll diameter	< 260 mm
Weight	390 kg		

The compact Rolle 9 is easy to transport and install.
